

Task 3: Interactive UI with JavaScript (DOM Manipulation)

This project demonstrates DOM manipulation using JavaScript ES6+. A button click dynamically updates the webpage with a mock user list.

File Name	Purpose
index.html	Structure of the webpage
style.css	Styling for the UI
script.js	JavaScript DOM manipulation logic

JavaScript Code:

```
const users = [
  { name: "John Doe", age: 22 },
  { name: "Alice Smith", age: 25 },
  { name: "Michael Johnson", age: 21 },
  { name: "Sophia Brown", age: 24 }
];

const loadBtn = document.getElementById("loadBtn");
const userList = document.getElementById("userList");

loadBtn.addEventListener("click", () => {
  userList.innerHTML = "";

  users.forEach(user => {
    const li = document.createElement("li");
    li.textContent = `${user.name} - Age: ${user.age}`;
    userList.appendChild(li);
  });
});
```
